AIR QUALITY
PROGRAM

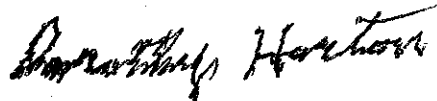

Dear Sir;

I am writing concerning the Draft Air Permit for the Hyperion Refinery. I am asking you to please not be in a hurry to issue this document until ordinary people have an opportunity to figure out what it means. Can't you present a simplified version of this so that the public can understand it? Also, I am asking that you would publish a list of all the anticipated yearly emissions from all the pollution, including refinery flares and upsets. These are the times when pollution is at the highest and should be included. Also what about all the dust during construction because of unpaved roads? Don't you think that the living conditions of people that will be trying to live in the area should be taken into consideration?

I do not understand why Hyperion has not had to come forth with a Environmental Impact Study. This should contain vital information that you would need to make a determination of the air quality. Shouldn't Hyperion have to pay for this and present it to you before you make a final decision?

Thank you for letting me have my say.
